

HIMACS

Circle: A bespoke freestanding washbasin shaped by ANG and HIMACS

Uniqueness and exclusivity characterise the essence of the Circle freestanding washbasin by Portuguese bathroom brand ANG. A project in which HIMACS plays a central role: Circle emerges from the integration of the HIMACS RCB330C countertop washbasin and a custom-made column available in a wide variety of materials, creating a sculptural composition defined by a contemporary design language.

Conceived as a personalised piece made exclusively to measure, Circle interprets and gives form to individual design visions. Each unit takes shape through a direct dialogue with the architecture and interior design of each intended setting, adapting to specific requirements, whether in residential spaces or commercial environments. The Circle project represents a truly bespoke design element, where material, compact proportions and detailing are precisely balanced.

This is a furnishing solution capable of transcending its primary function to become an expression of style and personality, transforming the bathroom into a distinctive and characterful space.

ANG selected HIMACS Solid Surface for the project, and adopted the RCB330C countertop washbasin model as its main reference allowing its essential aesthetic, together with the material's renowned performance, to guide the entire design process.

The Circle's washbasin element can be produced not only in the classic Alpine White finish but also in any colour from the HIMACS palette, including shades from the Calacatta, Gravilla, Aurora & Marmo and Terrazzo collections, and can be customised in size, ensuring maximum flexibility and optimum adaptation to specific project requirements.

HIMACS

The washbasin may also be specified with an integrated towel holder, a solution designed to enhance functionality while maximising spatial organisation.

Complementing the washbasin, the freestanding column is available in a wide selection of finishes and materials, including wood, stone and metal, as well as decorative patterns and textures that enrich the element with dynamic visual character.

The **HIMACS RCB330C model**, as with the complete **HIMACS** washbasin range when specified in Alpine White, is **SCS-certified thanks to the inclusion of 8% pre-consumer recycled content**, offering a more sustainable choice without compromising long-term performance and reliability.

HIMACS solid surface is distinguished by its exceptional resistance, thermoformability, hygienic properties, safety and practicality, as well as being easy to clean and repair. Its non-porous structure and seamless finish prevent the accumulation of dirt and significantly reduce the risk of bacterial or fungal growth. Furthermore, its composition is free from silica, formaldehyde, VOC emissions and nanoparticles, ensuring the confident enjoyment of a safe material.

The collaboration between ANG and HIMACS represents the meeting of a shared vision rooted in innovation and attention to detail. Deep expertise in solid surface material, combined with a rigorous production process and careful consideration of specific project requirements, enables the creation of unique pieces distinguished by an impressive aesthetic and functional identity.

HIMACS

ANG is a Portuguese brand specialising in the design and production of exclusive bathroom furniture for residential and contract projects. The company combines the manual expertise of skilled artisans with advanced production technologies; every detail is meticulously developed and executed with precision, reflecting the brand's commitment to quality. ANG collaborates with trusted partners and has chosen HIMACS for many years, a Solid Surface material with superior properties that enables the production of unique pieces designed to stand the test of time.

HIMACS

HIMACS *The shape of your ideas*

HIMACS is a high-performance solid surface material for architectural and interior applications, from façades and wall cladding to kitchens, bathrooms and bespoke furniture in commercial, residential and public spaces. Composed of minerals, acrylic and natural pigments, it delivers a smooth, non-porous and visually seamless surface meeting the highest standards of design, fabrication, durability and hygiene.

Thermoformable and seamless, HIMACS can be shaped into virtually any form, enabling fluid three-dimensional designs. Combining stone-like robustness with the workability of wood, it offers both creative freedom and technical precision.

Specified by leading architects and designers such as **Zaha Hadid, Jean Nouvel, Rafael Moneo, Karim Rashid, Marcel Wanders** and **David Chipperfield**, HIMACS is widely recognised in contemporary architecture and design.

Produced using **advanced thermal curing technology**, HIMACS features a dense, homogeneous structure for enhanced strength and durability. The **HIMACS Ultra range** combines advanced thermoforming capabilities with enhanced colour performance, enabling a minimum internal radius of 6 mm and delivering deep, consistent tones for expanded design possibilities.

HIMACS supports responsible specification through measurable sustainability attributes. Its durability, reparability and seamless fabrication extend product lifecycles and reduce waste, while off-cuts can be reused during fabrication.

Non-porous and easy to maintain, HIMACS does not emit VOCs or contain silica, formaldehyde or nanoparticles. Certified for indoor air quality, including **GREENGUARD Gold** and the highest level of **IAC certification**, it supports safe and healthy environments.

An expanding selection of colours, including Alpine White, incorporates **SCS-certified pre-consumer recycled content**, while HIMACS Shapes contain at least 8% certified recycled content. Environmental Product Declarations (EPDs) are available, and the material contributes to **LEED, BREEAM** and **DGNB** certification schemes.

Manufactured under ISO 14001 standards, HIMACS benefits from continuous environmental performance monitoring, including resource efficiency and reduced emissions.

Certified for quality, safety, hygiene and fire performance, HIMACS was the first Solid Surface to receive a European Technical Assessment (ETA) for façade applications (Alpine White S728).

A **15-year warranty** is provided for products fabricated and installed by certified members of the **HIMACS Quality Club network**.

HIMACS is designed and produced by LX Hausys, a global leader in advanced materials and a subsidiary of LX Holdings Corp.
