

BS EN ISO 11925-2: 2010

Ignitability Of Building Products Subjected To Direct Impingement Of Flame Part 2: Single Flame Source Test

A Report To: All Print Supplies Ltd

Document Reference: 364718

Date: 28th July 2016

Issue No.: 1

Page 1

**Testing
Advising
Assuring**

Executive Summary

Objective To determine the performance of the following product when tested in accordance with BS EN ISO 11925-2:2010.

Generic Description	Product reference	Thickness	Weight per unit area or density
Self-adhesive vinyl adhered to a plasterboard substrate	"LG Polymeric Vinyl 50 – 100micron"	13.0mm *	8.50kg/m ² *
Individual components used to manufacture composite:			
Self-adhesive film	"LG Polymeric Vinyl"	50-100 microns	Unable to provide
Substrate	"Gyproc Soundbloc"	12.5mm	700kg/m ²
*Determined by Exova Warringtonfire			
Please see pages 5 & 6 of this test report for the full description of the product tested			

Test Sponsor All Print Supplies Ltd, 7B Fairlie Road, Slough, SL1 4PY

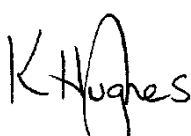

Test Results: On the set of six specimens which were subject to surface application, the maximum flame height reached was observed to be 40 ± 0.9mm.

On the set of six specimens which were subject to edge application, the maximum flame height reached was observed to be 30 ± 0.9mm

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor k=2, providing a coverage probability of approximately 95%. The uncertainty evaluation has been carried out in accordance with UKAS requirements.

Date of Test 3rd June 2016

Test Details

Purpose of test	<p>To determine the performance of specimens of a product when they are subjected to the conditions of the test specified in BS EN ISO 11925-2:2010 "Reaction to Fire tests - Ignitability Of Building Products Subjected to Direct Impingement of Flame – Part 2: Single Flame Source Test".</p> <p>The test was performed in accordance with the procedure specified in BS EN ISO 11925-2:2010 Reaction to Fire Tests - Ignitability of Building Products subjected to direct impingement of flame – Part 2: Single Flame Source Test, and this report should be read in conjunction with that BS EN ISO Standard.</p>
Scope of test	BS EN ISO 11925-2 specifies a method of test for determining the ignitability of building products by direct small flame impingement under zero impressed irradiance using specimens tested in a vertical orientation.
Fire test study group/EGOLF	Certain aspects of some fire test specifications are open to different interpretations. The Fire Test Study Group and EGOLF have identified a number of such areas and has agreed Resolutions which define common agreement of interpretations between fire test laboratories which are members of the Groups. Where such Resolutions are applicable to this test they have been followed.
Instruction to test	The test was conducted on the 3 rd June 2016 at the request of All Print Supplies Ltd, the sponsor of the test.
Provision of test specimens	The specimens were supplied by the sponsor of the test. Exova Warringtonfire was not involved in any selection or sampling procedure. Exova Warringtonfire supplied the substrate and bonded the composite together.
Conditioning of specimens	<p>The specimens were received on the 3rd May 2016.</p> <p>Prior to test the specimens were stored for 3 days in a standard atmosphere as defined in BS EN 13238:2010 Conditioning Procedures and General Rules for selection of substrates until constant mass was achieved.</p>
Intended application	Internal and external signage.
Substrate	The specimens were tested adhered to a plasterboard substrate.
Flame application time	The flame was applied for 30 seconds.

Description of Test Specimens

The description of the specimens given below has been prepared from information provided by the sponsor of the test. All values quoted are nominal, unless tolerances are given.

General description			Self-adhesive vinyl adhered to a plasterboard substrate	
Product reference			“LG Polymeric Vinyl 50 – 100micron”	
Name of manufacturer			LG Hausys	
Thickness			13.0mm (determined by Exova Warringtonfire)	
Weight per unit area			8.50kg/m ² (determined by Exova Warringtonfire)	
Self-adhesive film	Product reference		“LG Polymeric Vinyl”	
	Name of manufacturer		LG Hausys	
	Thickness		50 - 100 microns	
	Density / weight per unit area		See Note 1 below	
	Tape	Generic type		Polymeric calendared PVC
		Product reference		“LG Polymeric”
		Detailed description / composition details		PVC film with polymeric plasticisers for digital printing with adhesive backing and release liner
		Name of manufacturer		LG Hausys
		Thickness		50 – 100 microns
		Density / weight per unit area		See Note 1 below
		Colour reference		“White” (observed by Exova Warringtonfire)
		Flame retardant details		See Note 2 below
	Adhesive	Generic type		Acrylic based adhesive
		Product reference		See Note 3 below
		Name of manufacturer		See Note 3 below
		Colour reference		See Note 3 below
		Application rate / thickness		See Note 3 below
		Application method		See Note 3 below
		Flame retardant details		See Note 2 below
		Curing process		See Note 3 below
Substrate	Product reference		“Gyproc Soundbloc”	
	Generic type		Paper faced plasterboard	
	Name of manufacturer		British Gypsum	
	Thickness		12.5mm	
	Density		700kg/m ³	
	Flame retardant details		See Note 1 below	
Brief description of manufacturing process			See Note 1 below	

Note 1: The sponsor was unable to provide this information.

Note 2: The sponsor of the test has confirmed that no flame retardant additives were utilised in the production of the component.

Note 3: The sponsor was unwilling to provide this information.

Test Results

Number of specimens tested

Six specimens were tested, each of which were subjected to surface exposure to flame with the decorative face exposed.

Six specimens were tested, each of which were subjected to edge exposure to flame with the decorative face exposed.

Applicability of test results

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test, they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which they were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product which is supplied or used is fully represented by the specimens which were tested.

The test results for the individual specimens, together with observations made during the test and comments on any difficulties encountered during the test are given in Tables 1 and 2.

On the set of six specimens which were subject to surface application, the maximum flame height reached was observed to be $40 \pm 0.9\text{mm}$.

On the set of six specimens which were subject to edge application, the maximum flame height reached was observed to be $30 \pm 0.9\text{mm}$

The reported expanded uncertainty is based on a standard uncertainty multiplied by a coverage factor $k=2$, providing a coverage probability of approximately 95%. The uncertainty evaluation has been carried out in accordance with UKAS requirements.

Validity

The specification and interpretation of fire test methods are the subject of ongoing development and refinement. Changes in associated legislation may also occur. For these reasons it is recommended that the relevance of test reports over five years old should be considered by the user. The laboratory that issued the report will be able to offer, on behalf of the legal owner, a review of the procedures adopted for a particular test to ensure that they are consistent with current practices, and if required may endorse the test report.

This report may only be reproduced in full. Extracts or abridgements shall not be published without permission of **Exova Warringtonfire**.

Table 1**Test Flame Application Position - Surface Of Decorative Face**

Specimen No.	Ignition Yes/No	Time from start of test for flame tip to reach 150mm (seconds)	Extent of Flame Spread (± 0.9 mm)	Flaming Debris	Glowing	Extent of Damaged Area (mm)	
						Height	Width
1	Yes	Did not reach	30	None	None	59	12
2	Yes	Did not reach	40	None	None	68	15
3	Yes	Did not reach	30	None	None	55	12
4	Yes	Did not reach	30	None	None	69	13
5	Yes	Did not reach	30	None	None	68	14
6	Yes	Did not reach	40	None	None	60	14

Table 2**Test Flame Application Position - Edge Of Decorative Face**

Specimen No.	Ignition Yes/No	Time from start of test for flame tip to reach 150mm (seconds)	Extent of Flame Spread (± 0.9 mm)	Flaming Debris	Glowing	Extent of Damaged Area (mm)	
						Height	Width
1	Yes	Did not reach	20	None	None	30	17
2	Yes	Did not reach	30	None	None	55	15
3	Yes	Did not reach	30	None	None	36	15
4	Yes	Did not reach	20	None	None	38	13
5	Yes	Did not reach	20	None	None	42	12
6	Yes	Did not reach	20	None	None	36	17
